PROFESSIONAL SUMMARY:

Innovative and forward-thinking AI Engineer with a solid foundation in Computer Science, currently advancing my expertise through a Master's degree with a specialization in Augmented & Virtual Reality. I possess deep knowledge in Machine Learning, Deep Learning, Natural Language Processing (NLP), Computer Vision, Data Science, Generative AI, and Large Language Models (LLMs), with hands-on experience in various projects. Skilled in developing innovative AI solutions, including Retrieval-Augmented Generation (RAG) systems, and proficient in transforming complex challenges into scalable, impactful AI models. Committed to leveraging AI to solve real-world problems and contribute to technological advancements.

PROJECTS

Language Translator Model Using Transformer Architecture [View in GitHub](#)

- Developed a Neural Machine Translation system using the Transformer architecture, implementing attention mechanisms and encoder-decoder structures for accurate language translation
- Engineered data preprocessing pipelines to clean, tokenize, and prepare multilingual datasets, achieving efficient batch processing and optimization for model training
- Implemented custom training loops with learning rate scheduling to optimize model convergence, resulting in improved translation quality and reduced training time.
- Created a modular and scalable codebase allowing for experimentation with different hyperparameters and model configurations, showcasing strong software engineering practices

Network Security for Phishing Data

[View in GitHub](#)

- Designed and implemented an end-to-end machine learning pipeline to detect and classify phishing emails and messages, addressing real-world network security threats.

- Developed modular components for data ingestion, validation, transformation, model training, evaluation, and deployment using industry-standard practices.
- Applied advanced text preprocessing techniques and feature engineering (TF-IDF, NLP pipelines) to enhance model performance and reduce false positives.

Other Projects:

- Diabetes Prediction using SVM & Logistic Regression [View on GitHub](#)
- CNN Image Classifier [View on GitHub](#)
- IBM Data Science Capstone Project [View on GitHub](#)

CERTIFICATIONS

IBM Data Science [View Credentials](#)

IBM GenAI for Data Scientists [View Credentials](#)

Applied Data Science [View Credentials](#)

EDUCATION

Master of Computer Applications (MCA) - Augmented Reality & Virtual Reality (AR & VR) Aug 2023 - Sep 2025
Amity University, Noida (Online)

Bachelor of Science (BSc.) - Computer Science Honours Aug 2019 - Nov 2022
Assam University, Silchar (India)

SKILLS

Machine Learning | Deep Learning | Data Science | Natural Language Processing | Data Analysis | LLM | MLOps | Neural Networks | Generative AI | RAG | Python | Computer Vision | Data Visualization | Data Analysis | TensorFlow | ScikitLearn | Pytorch | Pandas | Seaborn | Matplotlib | Numpy | Database Management | Unity | Blender | LangChain | MySQL | MongoDB | Flask | FastAPI | JavaScript | Web Development | React | C++ | Java | Azure | AWS | CI/CD | Project Management | Communication | Time Management | Adaptability | Problem Solving |
